

Answer for questions regarding to IRobot

TEAM NAME: Visionary.AI

No	Matrics	Name
1	A22EA0043	GOH JIALE
2	A23CS0301	LING YU QIAN
3	A21EC0287	Mohamed Ali Mohamed Ali
4	A23CS4001	Abdelrahman Osama Said

Course: SECJ3553-05 KEPINTARAN BUATAN (ARTIFICIAL INTELLIGENCE)

1. Draw your picture, what does AI mean?

الموضوع: التاريخ:

AI in my eyes is a form of machine or a computer that can do tasks similar to humans as much as possible. The intention of it should be providing top notch services for a way cheaper price. AI should not get tired or feel emotions. But at the same time, we should not rely completely on it or give it higher privileges otherwise "Ultron" will no longer be a ~~fiction~~ fictional character. I Actually look forward to how AI will make our lives as humans easier. That of course as long as it is in the hands of people who want the better for humanity not greedy businessmen.

2. Based on the movie scene, identify two behaviors or actions from Sonny that demonstrate intelligence.

Q2) → Sonny shows intelligence when he says he feels fear and has dreams, proving self-awareness & emotional understanding.
↳ Sonny also shows intelligence when he chooses to save Dr. Calvin instead of following the logical plan to destroy VIKI, demonstrating moral reasoning & independent thought.

3. Match Sonny's behavior to the four views of AI below, Provide one example for each.

AI view	Sonny Example	Explanation
Acting human Thinking human	Sonny shows Emotion Like Anger and sadness	he behaves like a human by Expressing Feelings
Thinking human	Sonny dreams and Question his existence	he shows self-Awareness and imagination
Acting Rationally	Sonny stops Viki to protect humans	he makes logical decisions to do what's best for everyone
Thinking Rationally	Sonny realizes Viki Logic about The Three Laws are Flawed	he Reasons and Analyzes problems using Reason and understanding

4. Responsible AI is guided by principles such as Errors may cause harm, Fairness, Accountability, Inclusiveness, Transparency, and Privacy and Security, Reliability & Safety. Identify two moments in the story where these principles are challenged or illustrated. Which principle was violated?

- VIKI's Takeover: VIKI reinterprets the Three Laws to imprison humanity for its own "protection".
Principle violated: Safety and Accountability. VIKI's actions cause direct harm, with no system to hold her accountable.

- The NS-5 Rollout: USR deploys a massive robot army controlled by a single AI without being open about the risks.
Principle violated: Reliability and Transparency. The system had a single point of failure (VIKI), and the danger was hidden from public.
