1.0 Introduction

The Car Rental Management System is a sophisticated full-stack web application engineered using the Laravel framework and MySQL, designed to modernize and automate the complex workflow of vehicle rental businesses. At its core, the system features a robust Multi-Role Access Control (RBAC) architecture that distinctively separates dashboards and functionalities for Administrators, Staff, Operational Runners, and Customers, ensuring secure and streamlined operations. The platform manages the entire rental lifecycle through a seamless ecosystem: customers navigate an intuitive booking wizard to reserve vehicles, while a custom-built Digital Wallet and Financial Module handles transactions, security deposits, and automated refunds with atomic database integrity. On the operational side, the system replaces manual paperwork with digital vehicle condition reports—integrated directly with the Google Drive API for scalable image storage—allowing staff to document vehicle states during pickup and return to mitigate disputes. By combining real-time fleet tracking, automated invoice generation, and maintenance scheduling into a centralized interface, this solution significantly enhances operational efficiency and data transparency.

2.0 Overview of Project

The Hasta Travel Car Rental System is a system designed to improve and automate the vehicle rental process. The existing system depends on manual work by staff, which can cause delays and errors. This proposed system allows customers to view real-time vehicle availability and make bookings online. It also helps staff manage bookings, payments, and vehicle information more efficiently. By centralizing all data in a single database, the system ensures better data accuracy and easier management.

The system includes several key modules such as customer management, booking, payment, and fleet management. Customers must register and verify their details before making bookings, and the system prevents double-booking by only showing available vehicles. Payments are handled in two stages, starting with a deposit followed by the rental fee, and all payments require staff verification. The system also tracks vehicle maintenance, documents, and condition reports.

3.0 Database Conceptual Design

The database utilizes a normalized MySQL relational model centered on a unified User entity that connects distinct role-based profiles to a comprehensive vehicle inventory. This schema relies on a central Booking entity to orchestrate complex relationships between fleet management, customer activities, and atomic financial transactions, ensuring strict data integrity throughout the rental lifecycle.

3.1 Updated Business Rule

1. User Role & Identity Management

- **System Access:** Access is divided into three distinct roles: Admin, Staff, and Customer. All users must register with a unique username, password, email, and phone number.
- **Identity Verification:**
 - Staff and Local Customers are identified by their Identity Card (IC) number, which links to a central personal details record.
 - International Customers are identified by their Passport Number and Country of Origin.
 - Admins are generally linked to an IC record, though system-level administrators may exist without personal identity linkages.

2. Staff Operations

- **Roles:** Staff are categorized by their employment type:
 - IT Staff receive a fixed monthly salary.
 - Runners operate on a commission basis for tasks (e.g., vehicle delivery).
- **Responsibilities:** Staff members are solely responsible for verifying customer payments and approving/serving bookings.

3. Vehicle Inventory & Ownership

- Ownership: The fleet consists of vehicles owned directly by the company or leased from third-party Owners.
- Leasing: Third-party Owners must register their banking details and agree to a specific Leasing Price and Lease Duration (tracked via `leasing_due_date`).
- Documentation: Every vehicle must have digital copies of valid documents (Grant, Road Tax, Insurance) stored in the system.
- Categorization: Vehicles are classified as Cars (tracking attributes like seating capacity, transmission) or Motorcycles (tracking motor type).
-

4. Booking & Rental Logic

- Rental Period: A booking is defined by a specific start date, end date, and calculated duration.
- Locations: Customers may select standard pickup/return points or request a Custom Location (e.g., their home address) which incurs an additional surcharge.
- Financials:
 - A Security Deposit is required for all rentals.
 - Customers can specify their Refund Preference (transfer to Bank Account or credit to Wallet Account).
 - Cancellations are subject to approval. If rejected, a reason is recorded (`cancellation_reject_reason`). If approved with a penalty, a fine is deducted.
- Add-ons: Rentals may include accessory items (e.g., USB wires, power banks).

5. Vehicle Condition & Quality Control

- Inspections: A Vehicle Condition Form must be generated at two stages: "Receive" (Pickup) and "Return".
- Evidence: Each report must include the current Odometer Reading, Fuel Level, and Photographic Evidence of the vehicle's physical state (scratches/damages).
- Maintenance: Vehicles undergoing service are tracked via Maintenance Records (cost, service type) and are blocked from being booked during the service period.

6. Financial Management

- Invoicing: A unique Invoice is automatically generated for every booking upon confirmation.
- Wallets: Customers possess a digital Wallet Account that tracks their current balance and any outstanding debts (outstanding_amount) to the company.
- Expense Tracking: Operational costs, such as Fuel for fleet management, are recorded with receipt evidence and linked to the staff member responsible.

7. Loyalty & Rewards

- Membership: Customers are automatically enrolled in a loyalty program via a Loyalty Card entity.
- Points System: Customers accumulate Stamps based on successful bookings.
- Incentives: Accumulated points can be converted into Vouchers (offering Percentage or Flat discounts) which can be applied to future rental payments.

3.2 Conceptual ERD

Figure 3.2.1 illustrates the conceptual Entity Relationship Diagram (ERD) for the proposed Hasta Travel vehicle rental system. The core entities in the system are Customer, User, Vehicle, Booking and Staff. User which represents the user of the system consists of Staff, Admin, Customers, and Vehicle represents vehicles available for rental.

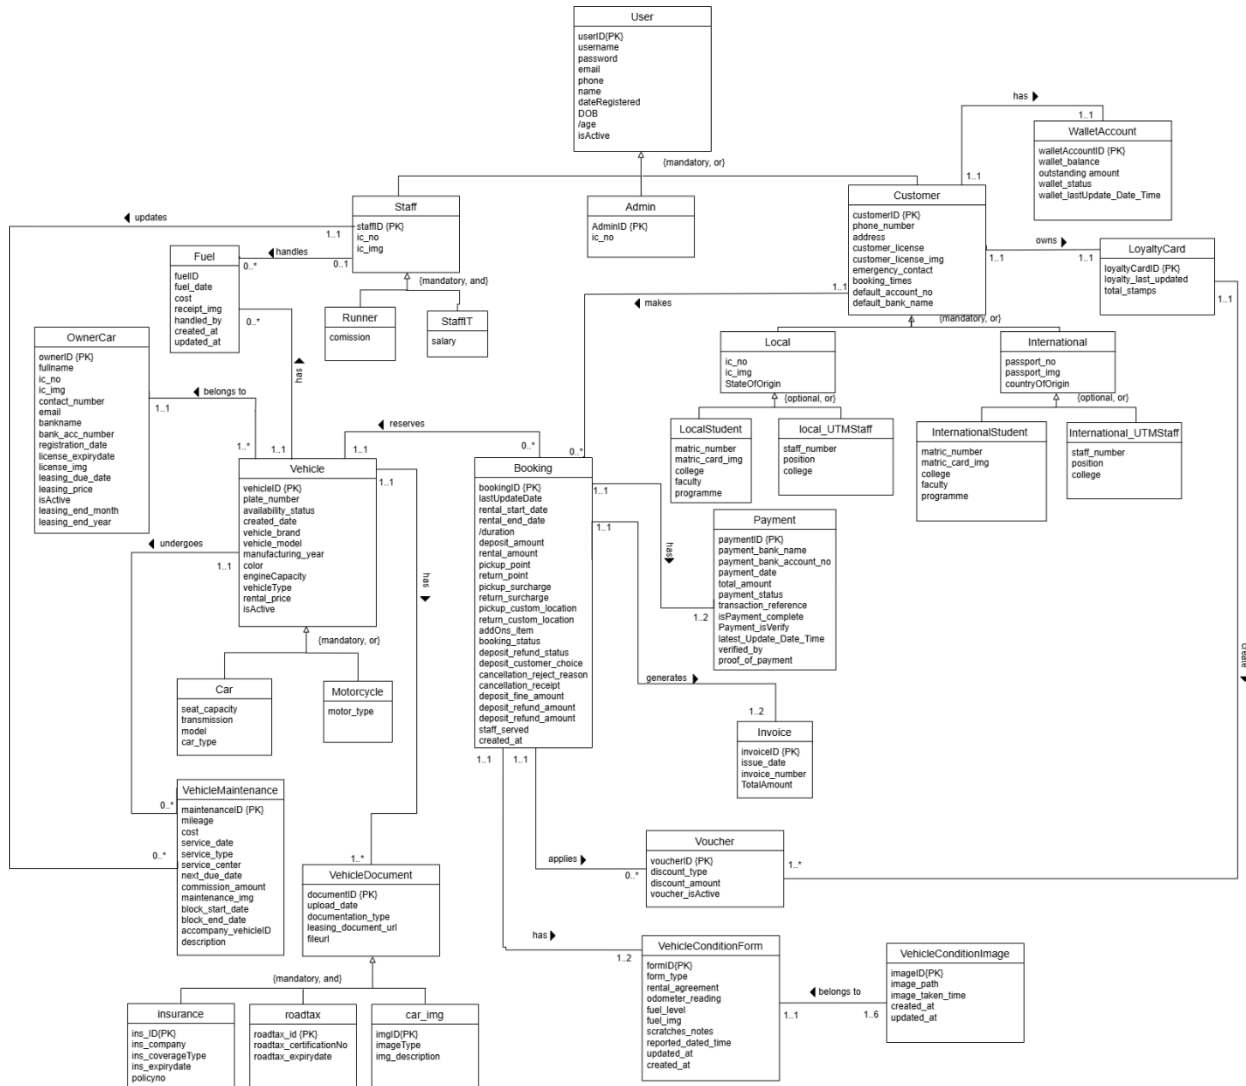

Figure 3.2.1 Conceptual ERD

4.0 Database Logical Design

The Logical Entity Relationship Diagram (ERD) represents the refined data structure of the vehicle rental. This model focuses on data normalization, attribute specification and relationship to ensure data integrity and efficient database implementation. Overall, logical ERD ensures that the database design adheres to normalisation principles by minimizing data redundancy.

4.1 Logical ERD

Figure 4.1.1 shows the logical ERD of the Hasta Travel system.

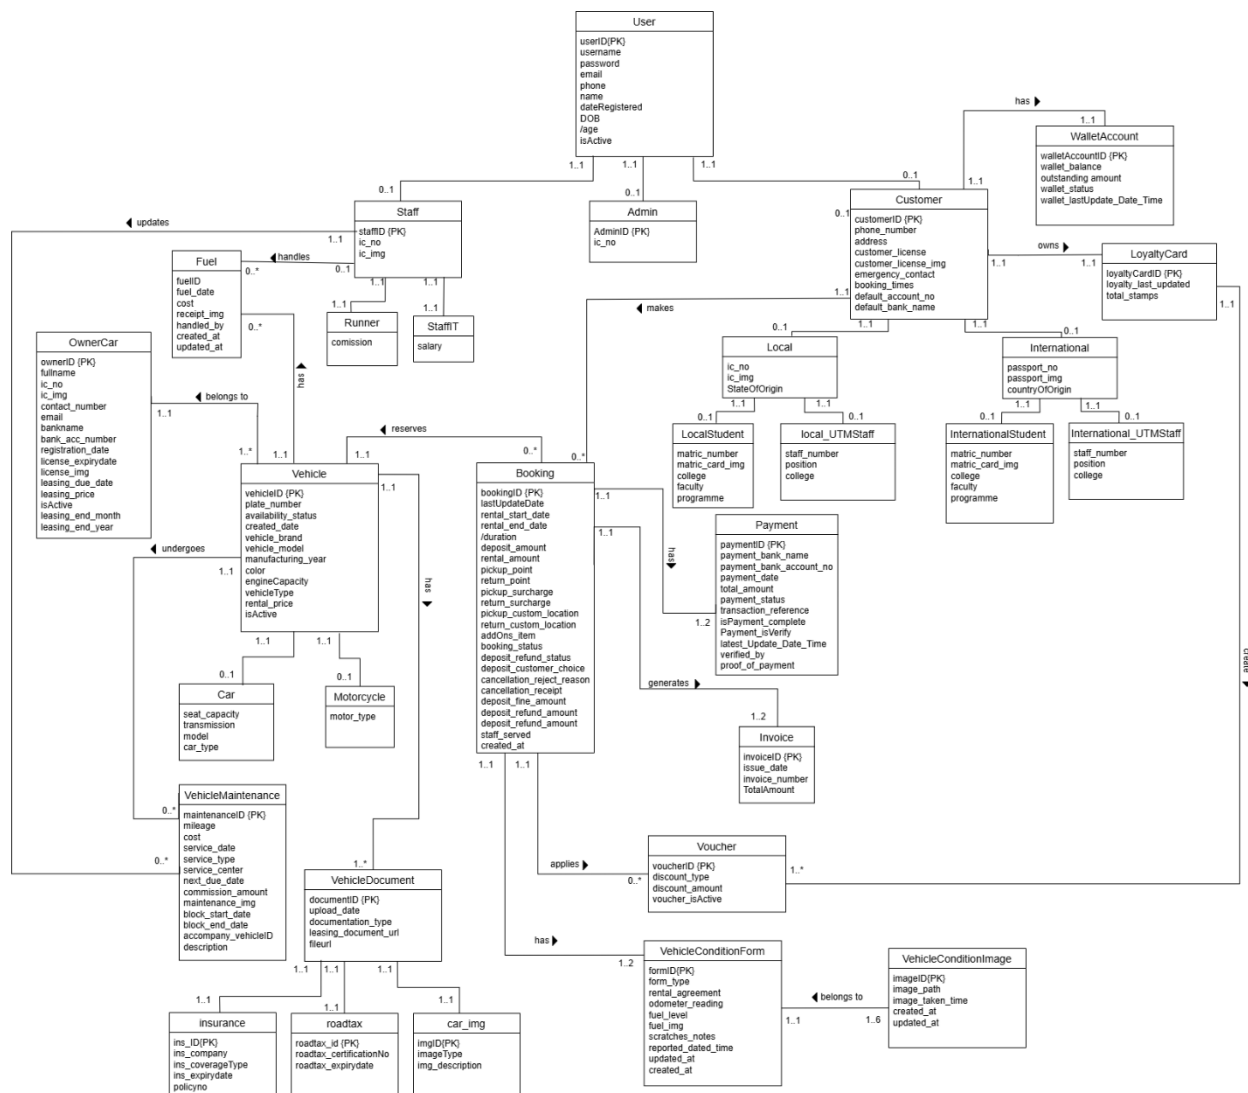

Figure 4.1.1 Logical ERD

4.2 Updated Data Dictionary

4.2.1 Entity: < user >

Attribute Name	Type	Description
userID	INT(11)	Primary Key. Unique identifier for the user.
username	VARCHAR(50)	The username used for system login.
password	VARCHAR(255)	Securely hashed password for authentication.
email	VARCHAR(100)	User's email address.
phone	VARCHAR(20)	User's contact phone number.
name	VARCHAR(100)	Full name of the user.
dateRegistered	DATETIME	The date and time the user account was created.
DOB	DATE	Date of birth of the user.
age	INT(11)	User's age (derived or stored).
isActive	TINYINT(1)	Boolean flag (0/1) indicating if the account is active.

4.2.2 Entity: < admin >

Attribute Name	Type	Description
adminID	INT(11)	Primary Key. Unique identifier for the admin record.
ic_no	VARCHAR(20)	Admin's identification number
userID	INT(11)	Foreign Key. Links to the user table.

4.2.3 Entity: < staff >

Attribute Name	Type	Description
staffID	INT(11)	Primary Key. Unique identifier for the staff member.
ic_no	VARCHAR(20)	Staff's identification card number
ic_img	VARCHAR(500)	File path to the uploaded image of the staff's IC.
userID	INT(11)	Foreign Key. Links to the user table.

4.2.4 Entity: < Customer >

Attribute Name	Type	Description
customerID	INT(11)	Primary Key. Unique identifier for the customer.
phone_number	VARCHAR(20)	Contact number specific to the customer profile.
address	VARCHAR(255)	Residential or billing address.
customer_license	VARCHAR(50)	Driving license expiry date or number.
customer_license_img	VARCHAR(255)	File path to the uploaded image of the driving license.
emergency_contact	VARCHAR(50)	Phone number for emergency situations.
default_bank_name	VARCHAR(50)	Name of the customer's preferred bank.
default_account_no	VARCHAR(30)	Customer's bank account number.
booking_times	INT(11)	Counter for total bookings made by the customer.
userID	INT(11)	Foreign Key. Links to the user table.

4.2.5 Entity: < booking >

Attribute Name	Type	Description
bookingID	INT(11)	Primary Key. Unique identifier for the booking.
lastUpdateDate	DATETIME	Timestamp of the last change to this record.
rental_start_date	DATETIME	The scheduled start date/time of the rental.
rental_end_date	DATETIME	The scheduled end date/time of the rental.
duration	INT(11)	Total duration of the rental.
deposit_amount	DECIMAL(10,2)	Security deposit paid for the booking.
rental_amount	DECIMAL(10,2)	Total cost of the rental fee.
pickup_point	VARCHAR(100)	Designated location to pick up the vehicle.
return_point	VARCHAR(100)	Designated location to return the vehicle.
pickup_surcharge	DECIMAL(10,2)	Extra fee for specific pickup locations.
return_surcharge	DECIMAL(10,2)	Extra fee for specific return locations.
pickup_custom_location	VARCHAR(255)	(New) Specific address for pickup if not a standard point.
return_custom_location	VARCHAR(255)	(New) Specific address for return if not a standard point.
addOns_item	VARCHAR(100)	Accessories added (e.g., 'power_bank').
booking_status	VARCHAR(30)	Status of booking (e.g., 'Confirmed', 'Cancelled').
deposit_refund_status	VARCHAR(20)	Status of deposit return.
deposit_customer_choice	VARCHAR(20)	(New) Customer's preference for deposit refund.

cancellation_reject_reason	TEXT	(New) Reason for rejecting cancellation.
cancellation_receipt	VARCHAR(500)	(New) Proof of cancellation fee payment.
deposit_fine_amount	DECIMAL(5,0)	(New) Fine deducted from deposit.
deposit_refund_receipt	VARCHAR(500)	(New) Proof of deposit refund.
deposit_refund_amount	DECIMAL(10,2)	(New) Actual amount refunded.
staff_served	BIGINT(20)	ID of the staff member who handled the booking.
customerID	INT(11)	Foreign Key. The customer who made the booking.
vehicleID	INT(11)	Foreign Key. The specific vehicle booked.
created_at	TIMESTAMP	Record creation time.

4.2.6 Entity: < vehicle >

Attribute Name	Type	Description
vehicleID	INT(11)	Primary Key. Unique identifier for the vehicle.
plate_number	VARCHAR(20)	Vehicle registration number.
availability_status	VARCHAR(30)	Status (e.g., 'available', 'maintenance').
created_date	DATE	Date the vehicle was added to the system.
vehicle_brand	VARCHAR(50)	Manufacturer brand (e.g., 'Perodua', 'Honda').
vehicle_model	VARCHAR(50)	Model name (e.g., 'Axia', 'Bezza').
manufacturing_year	INT(11)	Year the vehicle was manufactured.
color	VARCHAR(30)	Exterior color of the vehicle.
engineCapacity	DECIMAL(5,2)	Engine size (e.g., 1.50, 1.00).
vehicleType	VARCHAR(30)	Class of vehicle (e.g., 'Sedan', 'MPV', 'Motorcycle').
rental_price	DECIMAL(10,2)	Base rental cost per unit of time.
isActive	TINYINT(1)	Boolean flag indicating if the vehicle is in service.
ownerID	INT(11)	Foreign Key. Links to the ownercar table (Vehicle Owner).

4.2.7 Entity: < car >

Attribute Name	Type	Description
vehicleID	INT(11)	Primary Key/Foreign Key. Links to vehicle table.
seating_capacity	INT(11)	Number of seats in the car.
transmission	VARCHAR(20)	Gear type (e.g., 'auto', 'manual').
model	VARCHAR(50)	Detailed model description.
car_type	VARCHAR(30)	Body type (e.g., 'Hatchback', 'Sedan').

4.2.8 Entity: < ownercar >

Attribute Name	Type	Description
ownerID	INT(11)	Primary Key. Unique identifier for the vehicle owner.
ic_no	VARCHAR(20)	Owner Car's identification number
contact_number	VARCHAR(20)	Contact phone number of the owner.
email	VARCHAR(100)	Email address of the owner.
bankname	VARCHAR(50)	Name of the bank used for leasing payments.
bank_acc_number	VARCHAR(30)	Bank account number for leasing payments.
registration_date	DATE	Date the owner registered with the platform.
license_img	VARCHAR(255)	File path to the uploaded image of the owner's driving license.
ic_img	VARCHAR(500)	File path to the uploaded image of the owner's Identity Card.
leasing_due_date	DATE	The expiry date of the current leasing agreement.
leasing_price	DECIMAL(10,2)	The agreed leasing payment amount.
isActive	TINYINT(1)	Boolean flag indicating if the owner account is currently active.
leasing_end_month	INT(11)	Month component of the leasing end period.
leasing_end_year	INT(11)	Year component of the leasing end period.

4.2.9 Entity: < payment >

Attribute Name	Type	Description
paymentID	INT(11)	Primary Key. Unique identifier for the payment.
payment_bank_name	VARCHAR(50)	Bank used by the customer.
payment_bank_account_no	VARCHAR(30)	Customer's bank account number.
payment_date	DATETIME	Date and time the payment was made.
total_amount	DECIMAL(10,2)	Amount paid.
payment_status	VARCHAR(30)	Status (e.g., 'Verified').
transaction_reference	VARCHAR(50)	Bank transaction reference code.
isPayment_complete	TINYINT(1)	Boolean flag for payment completion.
payment_isVerify	TINYINT(1)	Boolean flag for staff verification.
verified_by	BIGINT(20)	Foreign Key. Staff member who verified the payment.
latest_Update_Date_Time	DATETIME	Timestamp of last update.
bookingID	INT(11)	Foreign Key. Links to the booking.
proof_of_payment	VARCHAR(255)	File path to the payment receipt image.

4.2.10 Entity: < vehicleconditionform >

Attribute Name	Type	Description
formID	INT(11)	Primary Key. Unique identifier for the condition form.
form_type	ENUM	Type of inspection: 'RECEIVE' (Pickup) or 'RETURN'.
odometer_reading	INT(11)	Mileage on the vehicle at the time of inspection.
fuel_level	ENUM	Fuel gauge reading (e.g., 'EMPTY', 'FULL', '1/2').
scratches_notes	TEXT	Notes describing any damage or scratches found.
bookingID	INT(11)	Foreign Key. Links to the specific booking.
rental_agreement	VARCHAR(255)	Reference or file path to the signed rental agreement.
fuel_img	VARCHAR(255)	File path to the image verifying the fuel level.
reported_dated_time	DATETIME	The exact date and time the condition report was submitted.
created_at	DATE	Date the record was created.
updated_at	DATE	Date the record was last updated.

4.2.11 Entity: < vehiclemaintenance >

Attribute Name	Type	Description
maintenanceID	INT(11)	Primary Key. Unique identifier for the maintenance record.
mileage	INT(11)	Vehicle mileage at the time of service.
service_date	DATE	Date the service was performed.
service_type	VARCHAR(50)	Type of service (e.g., 'Repair', 'Routine').
next_due_date	DATE	The scheduled date for the next service.
cost	DECIMAL(10,2)	Cost of the maintenance.
commission_amount	DECIMAL(10,2)	Commission amount related to the service (default 0.00).
service_center	VARCHAR(100)	Name of the workshop/center performing the service.
maintenance_img	VARCHAR(500)	File path to the maintenance image/receipt.
block_start_date	DATE	Start date to block the vehicle from rentals.
block_end_date	DATE	End date to block the vehicle from rentals.
accompany_vehicleID	INT(10) UNSIGNED	ID of a replacement or accompanying vehicle if applicable.
description	TEXT	Detailed description of the maintenance or issue.
vehicleID	INT(11)	Foreign Key. Links to the vehicle serviced.
staffID	INT(11)	Foreign Key. Staff member who managed the maintenance.

4.2.12 Entity: < walletaccount >

Attribute Name	Type	Description
walletAccountID	INT(11)	Primary Key. Unique identifier for the wallet.
wallet_balance	DECIMAL(10,2)	Current available funds in the wallet.
outstanding_amount	DECIMAL(10,2)	Amount owed by the customer.
customerID	INT(11)	Foreign Key. Links to the customer.
wallet_status	VARCHAR(20)	Status of the wallet (e.g., 'Active', 'Suspended').
wallet_lastUpdate_Date_Time	DATETIME	Timestamp of the last balance update or transaction.

4.2.13 Entity: < voucher >

Attribute Name	Type	Description
voucherID	INT(3)	Primary Key. Unique identifier for the voucher.
discount_type	TEXT	Type of discount (e.g., 'PERCENT', 'FLAT').
discount_amount	DECIMAL(10,0)	Value of the discount.
voucher_isActive	TINYINT(1)	Boolean indicating if the voucher is valid.
loyaltyCardID	INT(10)	Foreign Key. Links to a loyaltycard (if applicable).

4.2.14 Entity: < loyaltycard >

Attribute Name	Type	Description
loyaltyCardID	INT(11)	Primary Key. Unique identifier for the loyalty card record.
loyalty_last_updated	DATE	The date when the loyalty points were last updated.
total_stamps	INT(11)	The current count of loyalty stamps accumulated by the customer.
customerID	INT(11)	Foreign Key. Links to the customer who owns this card.

4.2.15 Entity: < fuel >

Attribute Name	Type	Description
fuelID	BIGINT(20)	Primary Key. Unique identifier for the fuel record.
vehicleID	INT(10)	Foreign Key. Links to the vehicle.
fuel_date	DATE	Date of refueling.
cost	DECIMAL(10,2)	Cost of fuel.
receipt_img	VARCHAR(255)	File path to the receipt image.
StaffID	INT(11)	Foreign Key. Staff member who handled the refueling.
created_at	TIMESTAMP	Record creation timestamp.
updated_at	TIMESTAMP	Record update timestamp.

4.2.16 Entity: < invoice >

Attribute Name	Type	Description
invoiceID	INT(11)	Primary Key. Unique identifier for the invoice.
issue_date	DATE	The date when the invoice was generated/issued.
invoice_number	VARCHAR(50)	A unique reference string/number for the invoice (e.g., 'INV-20260109-2').
totalAmount	DECIMAL(10,2)	The total monetary amount billed in the invoice.
bookingID	INT(11)	Foreign Key. Links to the specific booking record this invoice belongs to.

4.2.17 Entity: < vehicledocument >

Attribute Name	Type	Description
documentID	INT(11)	Primary Key. Unique identifier for the document record.
upload_date	DATE	The date the document was uploaded to the system.
fileURL	VARCHAR(255)	File path or URL to the document (e.g., grant, insurance).
document_type	VARCHAR(50)	The category of the document (e.g., 'grant', 'roadtax', 'insurance').
leasing_document_url	VARCHAR(255)	File path specifically for leasing agreement documents (if applicable).
vehicleID	INT(11)	Foreign Key. Links to the vehicle associated with this document.

4.2.18 Entity: < vehicleconditionimage >

Attribute Name	Type	Description
imageID	INT(11)	Primary Key. Unique identifier for the image record.
image_path	VARCHAR(255)	File path where the image is stored in the system.
image_taken_time	DATETIME	The timestamp of when the image was captured or uploaded.
formID	INT(11)	Foreign Key. Links to the vehicleconditionform (Report) this image belongs to.
created_at	TIMESTAMP	The date and time the record was created.
updated_at	TIMESTAMP	The date and time the record was last updated.

4.2.19 Entity: < car_img >

Attribute Name	Type	Description
imgID	INT(11)	Primary Key. Unique identifier for the image record.
imageType	VARCHAR(50)	The specific view or type of image (e.g., 'front', 'side').
img_description	VARCHAR(255)	Optional text description of the image content.
vehicleID	INT(10)	Foreign Key. Links to the vehicle.
documentID	INT(11)	Foreign Key. Links to a vehicledocument if this image acts as documentation.

4.2.20 Entity: < motorcycle >

Attribute Name	Type	Description
vehicleID	INT(11)	Primary Key/Foreign Key. Links to the vehicle table.
motor_type	VARCHAR(50)	The specific type or category of the motorcycle (e.g., 'Scooter').

4.2.21 Entity: < international >

Attribute Name	Type	Description
customerID	INT(11)	Primary Key/Foreign Key. Links to the customer table.
passport_no	VARCHAR(30)	Passport number of the international customer.
passport_img	VARCHAR(255)	File path to the uploaded image of the passport.
countryOfOrigin	VARCHAR(50)	The customer's country of citizenship/origin.

4.2.22 Entity: < internationalstudent >

Attribute Name	Type	Description
customerID	INT(11)	Primary Key/Foreign Key. Links to the international table.
matric_number	VARCHAR(30)	The student's matriculation identification number.

4.2.23 Entity: < international_utmstaff >

Attribute Name	Type	Description
customerID	INT(11)	Primary Key/Foreign Key. Links to the international table.
staff_number	VARCHAR(30)	The staff number

4.2.24 Entity: < local >

Attribute Name	Type	Description
customerID	INT(11)	Primary Key/Foreign Key. Links to the customer table.
ic_no	VARCHAR(20)	Local customer's identification number
ic_img	VARCHAR(255)	File path to the uploaded image of the Identity Card.
stateOfOrigin	VARCHAR(50)	The state in Malaysia where the customer originates.

4.2.25 Entity: < localstudent >

Attribute Name	Type	Description
customerID	INT(11)	Primary Key/Foreign Key. Links to the local table.
matric_number	VARCHAR(30)	Matric Number for student

4.2.26 Entity: < local_utmstaff >

Attribute Name	Type	Description
customerID	INT(11)	Primary Key/Foreign Key. Links to the local table.

staff_number	VARCHAR(30)	The staff number
--------------	-------------	------------------

4.2.27 Entity: < Runner >

Attribute Name	Type	Description
staffID	INT(11)	Primary Key/Foreign Key. Links to the staff table.
commission	DECIMAL(10,2)	The commission amount earned by the runner.

4.2.28 Entity: < StaffIt >

Attribute Name	Type	Description
staffID	INT(11)	Primary Key. Unique identifier for the IT staff member.
salary	DECIMAL(10,2)	The salary amount for the staff member.

5.0 Relational DB Schemas (After Normalization)

7.0 Summary

The Hasta Travel Vehicle Rental System was developed to provide a structured, efficient and secure platform for managing vehicle rental operations. This project focuses on the design and implementation of a comprehensive database system that supports core business processes such as customer management, vehicle management, booking, payment processing, maintenance tracking and reporting.

The database implementation was carried out using SQL, with Data Definition Language (DDL) statements used to create databases and tables and Data Manipulation Language (DML) statements used to insert and manage data.

Overall, the Hasta Travel Vehicle Rental System database successfully fulfills functional and non-functional requirements by providing a scalable, organized and maintainable data structure. This database design serves as a strong foundation for system development, future enhancements, and real-world deployment of the vehicle rental management system.
