1.0 Declaration page – Individual Contribution

Every member was assigned to their parts during system development process. Every member makes contributions including commits, addition and deletion. However, group member Hafiz uses a wrong email address during commits causing the missing of commits records before 21 January 2026 but he still has commit record in commit log. There are total of 251 commits till 23 January 2026 12am as shown in Figure 1.0.1. Figure 1.0.2 shows the commit contributor over time.

Commit Type Distribution

Commit Type	Count	Examples
Merge Commits	4	Merge branch 'main'
Conflict Resolution	2	resolve conflict merge
UI / Design	2+	UI, UI admin and staff, Redesign welcome page
Database / Backend	1+	updates db, database connection and car browse
Feature Implementation	5+	Show CarKey Location..., agreement and stepper flows, feat: Improve customer booking flow
Bug Fixes	5+	fix browser, fix filter in homepage, fix calendar
Minor Changes	20+	adjustment, minor, push

Major Features Contributed

1. Booking Stepper Flow (Dec 16, 2025)

- Agreement page with PDF rendering
- Multi-step booking navigation
- Status transition management
- Integration with pickup and return processes

2. Dashboard & Homepage Redesign

- HASTA Travel branding
- Car browse interface
- Real-time vehicle status filtering
- Dynamic vehicle filter
- Google reviews integration

3. Vehicle Management

- Vehicle display and filtering
- Real-time database connection
- Browse interface updates
- Car specification management

4. Key Location Image Feature (Jan 22, 2026)

- Retrieve previous vehicle condition images during pickup
- Display key storage location from return forms
- Image path handling with case-sensitivity fixes
- File existence verification

5. Profile Completion Requirement (Dec 27, 2025)

- Enforce profile completion before booking
- IC number validation and parsing
- Malaysian IC Helper integration
- DOB extraction and age calculation

6. Payment & Booking Flow (Jan 9-10, 2026)

- Deposit and balance payment options
- Surcharge implementation
- Payment receipt management
- Booking status protection (Ongoing/Completed)

7. Malaysian IC Parsing (Jan 22, 2026)

- YYMMDD → DOB extraction
- Century-aware date calculation
- Age dynamic calculation
- IC validation and formatting
- Integration across user creation/update flows

Technical Contributions

Code Quality Enhancements

- UI/UX consistency across application
- Route organization
- Model relationship management
- Controller logic separation

Key Technologies Used

- **Laravel 10+** - Backend framework
- **Blade templating** - View rendering
- **Eloquent ORM** - Database interactions
- **Bootstrap/Tailwind CSS** - Styling
- **FullCalendar** - Calendar integration
- **PDF generation** - Agreement documents

Database Work

- Vehicle conditions table management
- Booking status tracking
- Payment records

Working Email Addresses

- Primary: `hafiz@example.com` (47 commits)
- Secondary: `mhafizreepei05@gmail.com` (3 commits)

Summary

1. **User Interface & Experience** - Homepage redesign, component design, responsive layouts
2. **Booking Management**- Stepper flows, status transitions, agreement handling
3. **Feature Development**- Key location images, Malaysian IC parsing, profile validation
4. **Bug Resolution**- Browser compatibility, filter logic, calendar functionality

50 commits represent consistent, high-impact development across both frontend and backend systems, with recent focus on payment flows and Malaysian user-specific features (IC parsing, DOB management).

Last Updated: January 22, 2026

1.2 Individual Contribution - Ahmad Irfan bin Azahan (25%)

I was mainly responsible for developing the Login and Registration, View Booking, and Pickup and Return pages. My work focused on making sure these features function correctly.

For the system development, I implemented the user login and registration feature to allow customers to create accounts and access the system securely. I also developed the View Booking module, which enables users to view their booking details such as vehicle information, rental period, and booking status. In addition, I worked on the Pickup and Return module to support the vehicle pickup and return process and ensure that booking records are updated correctly in the system.

Overall, my contribution focused on delivering functional user modules and clear documentation. I contributed 49 commits throughout the development period, as shown in the diagram below.

1.3 dIndividual Contribution – Cheong Yi Shien (25%)

In the system development project of Hasta Travel Vehicle Rental System, I was primarily responsible for the design, development and implementation of the Admin module. My contributions covered both technical development and system documentation and ensure the system meets the functional and academic requirements.

For the development aspect, I designed and implemented all core admin functionalities, including administrator authentication, staff management, data management and system monitoring features. I developed backend logic using PHP and SQL to support CRUD operations and validation. I also worked on integrating the admin dashboard with the database to ensure accurate data retrieval, updates and reporting. Throughout the development process, I conducted testing to verify that admin features functioned correctly and handled errors appropriately.

Besides system development, I was also responsible for preparing several system documentation parts and user manual writing. Overall, my individual contribution focused on ensuring that the administrative components of the system were fully functional and ensure the documentation are well-documented.

I have contribute 39 commits along the system development periods as shown in the figure below.

Overview

Project Contribution Summary: Payment & Booking Modules

Contributor: Ling Yu Qian (and aliases)

1. Core Wallet & Payment Infrastructure

- **Dedicated Wallet Controller:** Architected a specific WalletController to decouple financial logic from general user actions, ensuring secure handling of balances and deposits (2fe1d3a).
- **Payment page and QR:** calculate the rental fee from the booking page (show the remaining price that needs to be paid in booking history with a progress bar, booking status, and payment status). Automatically retrieve bank details in the user profile, making the payment flow smooth.
- **Automated Deposit Handling:** Implemented the logic to **automatically deduct** the security deposit from the user's wallet upon booking confirmation (ec3419f) and fixed the standard deposit rate to 50 (bc16f41).
- **Refund Logic:** Engineered the refund system to ensure deposits are correctly returned to the user's wallet after a vehicle is returned (16741a0), fixing critical logical errors in the calculation (a7bbfe5).

2. Booking Lifecycle Synchronization

- **Flow Enforcement:** Created a "Block" mechanism to prevent users from continuing a booking once the vehicle has been marked as returned, closing the loop on the rental process (0745e35).
- **Status Syncing:** Synchronized the Booking Status and Payment Status tasks, ensuring that when a car is picked up or returned, the payment status updates instantly in the database (f8f0236).
- **Pick-Up Logic:** Fixed the flow for ongoing pick-ups to ensure the transition to "Returned" status is smooth (6ed2469, 2b6988d).
- **Cancellation logic:** If user want to cancel within 12 hours of pick-up time, they either burn their deposit or reschedule the time to rent the car.

- **Reschedule** : automatically calculate the rental fee based on the time chosen by the user.

3. Invoicing System

- **PDF Invoice generation for admin and customer::** Built the specific views and logic for customers and admin to view and download their own invoices (eaea701, c6ae108) after their payment verified by admin
- **PDF Agreement Fixes:** Debugged the PDF generation tool, specifically fixing variable naming conflicts (localCustomer) that were causing crashes when generating rental agreements (6ce14d5).
- **Invoice History:** Solved issues where past invoices were not displayed correctly in the user history (2f602ba).
- **Email notification:** The system sent email to user after they pay the deposit and rental fee

4. Loyalty & Promotions (Vouchers)

- **Loyalty Card System:** Implemented the backend logic for the Loyalty Card feature (4add5e1).
- **Voucher Management:** Developed the logic for applying vouchers to bookings (b88e238) and alerting users about voucher status (fba9077).
